

eBPCO User Portal

Master Development Command

Build-Ready Specification for the Business Owner Web Portal

Document Type	Master Development Command
Project	Electronic Business Permit and Clearance Office (eBPCO)
Target Platform	Responsive Web Application — Business Owner Portal
Parity Reference	ebpco-mobile (Flutter) + E-BPCO-Software-main (Angular Admin)
Version	1.0.0
Status	Draft — Approved for Build Planning
Date	August 26, 2026
Prepared For	Michaela Angela E. Cailing

Compiled directly from the existing eBPCO mobile app, admin portal, and documentation repository — no invented data.

Table of Contents

1	Purpose & Authority
2	Scope Directive
3	Target Role — Business Owner
4	Recommended Technology Stack
5	Reconciled Data Model
6	Information Architecture & Navigation
7	Screen-by-Screen Command List
8	Required Documents Master Checklist (all 19 permit types)
9	Application Lifecycle & Status Parity
10	Payment & Assessment Model
11	Mobile → Web Feature Parity Matrix
12	Design System & Branding Directives
13	Non-Functional, Security & Compliance Requirements
14	Recommended Build Phases
15	Open Decisions Requiring Stakeholder Input
16	Appendix — Reference Enumerations & Source Files

Purpose & Authority

This document is a **build-ready command specification** for a new eBPCO **User Portal** — a responsive web application through which registered business owners register businesses, apply for permits, upload requirements, pay assessed fees, track applications, and download issued permits. It exists because, today, no business-owner-facing web surface exists: eBPCO currently has only an internal **Admin Web Portal** (`EBPCO WEB ADMIN/E-BPCO-Software-main` , Angular) used by municipal staff, and a **Mobile Application** (`ebpc-mobile` , Flutter) used by business owners. The User Portal must be the web counterpart of the mobile app — full feature and data parity, same applicant-facing vocabulary, same document requirements.

This document was produced by directly inventorying both existing codebases (data models, screens, enums, business logic) rather than by re-deriving requirements from scratch. Where the project's own aspirational documentation series (`docs/08-Reusable-Stitch`) already defines a correct architectural framework — the Business Owner role, the stitch-based navigation model — this command adopts it directly. Where that series' content was never implemented (e.g. classic DTI/SEC business-registration flows), this command does **not** carry it forward; see Section 2.

How to use this document. Each numbered section is a self-contained command block. When directing a development team or an AI coding assistant to build a piece of the User Portal, reference the relevant section by number and title (e.g. *"Build Section 7.3 — Permit Application Catalog, using the document checklist in Section 8"*) rather than re-explaining requirements from memory.

Scope Directive

Naming vs. reality. Despite the name "Business Permit and Clearance Office," neither the mobile app nor the admin portal implements a classic BPLO business-registration flow (DTI/SEC/CDA registration, Barangay Business Clearance, Sanitary Permit for a business, Mayor's/Business Permit renewal). Both real, working systems are scoped to the **Office of the Building Official (OBO), Zoning (MPDO), and Bureau of Fire Protection (BFP)** domain: construction, engineering, and fire-safety permits — 19 permit types in total. The only place DTI/SEC-style fields appear is a single aspirational line in `docs/08-Reusable-Stitch/08-Permit-Application-Stitch.md`, never implemented anywhere.

Directive (confirmed with project owner, 2026-08-26): the User Portal targets the actual implemented 19-permit-type catalog, in full parity with the mobile app and admin portal. A classic DTI/SEC/BPLO business-registration module is explicitly **out of scope for v1** and is not specified in this document. If that scope is desired later, it should be commissioned as a separate module and a separate command document, since it would require an entirely new document catalog, fee schedule, and workflow distinct from everything specified below.

In scope for v1:

- Business owner account registration, authentication, and profile management.
- Registration and management of multiple businesses per user.
- Application for any of the 19 OBO / Zoning / BFP permit types, plus the generic New / Renewal / Amendment permit flow.
- Document upload against each permit type's real requirements checklist, plus a reusable personal document library ("My Documents").
- Fee assessment (Order of Payment) viewing, payment submission (Bank Transfer / Onsite), and payment/receipt history.
- Application status tracking using the same applicant-facing vocabulary as mobile.
- Notifications, and download of the issued permit once released.

Target Role — Business Owner

Sourced from `docs/08-Reusable-Stitch/02-User-Roles.md`, the only existing role definition for this user type, adopted verbatim as the User Portal's access contract.

3.1 Responsibilities

- Register an account and manage a personal profile.
- Register and manage one or more businesses.
- Apply for, renew, and amend permits.
- Upload required documents.
- Select a payment method and complete payment.
- View payment history.
- Track application status.
- Receive notifications.
- Download approved/issued permits.

3.2 Accessible Modules ("Stitches")

Authentication · Dashboard · Business Management · Permit Application · Permit Renewal · Permit Amendment · Document Upload · Payment · Application Tracking · Notification Center · Profile.

Business Owner is an **external** role, isolated from all internal administrative functions (Evaluator, Inspector, Payment Officer, Approving Officer, Administrator, Super Administrator). The User Portal must never expose internal review/approval/configuration actions — those remain exclusive to the Admin Web Portal.

Recommended Technology Stack

Layer	Recommendation	Rationale
Framework	Angular 22, standalone components, signals	Identical to the existing Admin Web Portal — enables direct reuse of the TypeScript domain models (Section 5), design tokens, and validation logic, and keeps one Angular skill set across both internal and external web surfaces.
State	Signals-based stores, mirroring <code>ApplicationStore</code> pattern	Matches the admin app's own <code>core/domain/*-store.ts</code> convention so the eventual swap to a real backend is a drop-in replacement, exactly as that code's own comments anticipate.
Routing	Angular Router with role/auth guards	Parallels mobile's <code>go_router</code> auth-redirect pattern (<code>AuthProvider</code> as <code>refreshListenable</code>).
Backend/API	To be designed — does not exist yet.	Neither existing system has a backend. See Section 15.
File uploads	Standard multipart upload to the future API; client-side accepts PDF, JPG, JPEG, PNG	Matches the mobile app's accepted formats exactly (<code>step7_required_documents.dart</code> , <code>SavedDocumentFileType</code>).

This is a default, not a mandate. Confirm the framework choice with the team before build start — see Section 15, Open Decision #1.

Reconciled Data Model

No backend exists in either the admin portal or the mobile app — both use in-memory mock repositories. The entities below reconcile the Angular admin's TypeScript models (`core/domain/*.model.ts` , generally the richer, more complete shape) with the Flutter mobile app's Dart models, and constitute the data contract the User Portal — and the eventual shared backend — must implement.

5.1 User / Applicant

Field	Type	Notes
id, firstName, middleName, lastName	string	middleName optional, per mobile registration Step 1.
email, mobileNumber	string	Mobile format 09XXXXXXXXX (PH). Email read-only after registration per mobile's Edit Profile screen.
address, barangay, city, province, zipCode	string	
applicantType	'Individual' 'Authorized Representative' 'Corporate Officer' null	From admin's <code>applicant.model.ts</code> — adopt on web even though mobile doesn't yet collect it, since permit wizards (e.g. Building Permit Step 6 "Consent/Authorization") need it.
emailVerification, mobileVerification	{status, method, verifiedBy, verifiedAt}	status: Unverified / Pending Verification / Verified / Verification Failed. Must be real (OTP/email-link) on the User Portal — both existing apps only mock this.
accountStatus	'verified' 'pending' 'suspended'	From mobile's <code>UserModel</code> .
photoPath, registeredSince	string / date	

5.2 Business

Field	Type	Notes
id, name	string	
category	'Retail' 'Food Service' 'Services' 'Manufacturing' 'Wholesale' 'Other'	Identical enum in both admin and mobile.
ownerApplicantId	string	Many businesses to one owner — a single account manages multiple businesses.
street, barangay, city, province	string	
registrationNumber	string	System-generated, format REG-{year}-{seq} .

dateRegistered	date	
status	'Active' 'Inactive'	

5.3 Application Record

Field	Type	Notes
id, applicationNumber	string	Format E-BPC0-{year}-{seq} for the generic flow; permit-specific prefixes (BP- , REN- , ZLC- , FSEC- , etc.) for the 19 domain wizards.
businessId, businessName, applicantId	string	
permitType	PermitType (19-value union)	See Section 8 / Appendix 16.1 for the full list.
applicationAction	'New' 'Renewal' 'Amendment'	
lifecycleStatus	ApplicationLifecycleStatus (19 values)	See Section 9.
evaluationStage, evaluationResult	enum	Initial / Zoning / Fire Safety / OBO / Final Approval; Pending / Passed / Revision Required / Rejected.
paymentStatus	enum	Not Yet Available / Pending Verification / Partially Paid / Paid / Overdue.
permitReleaseStatus	enum	Not Ready / Ready for Release / Released.
assessedAmountCentavos	number null	Store money as integer centavos, matching admin's convention (avoids float rounding on currency).

5.4 Application Document & Document Library

Field	Type	Notes
id, applicationId, requirementId, label, fileName	string	requirementId ties back to the catalog entry in Section 8.
status	'Missing' 'Uploaded' 'Submitted' 'Under Review' 'Accepted' 'Rejected' 'Revision Required' 'Expired'	remarks is required when status is Rejected or Revision Required.
issuingOffice, issueDate, expiryDate	string / date	Optional, for time-bound documents (e.g. PRC license validity).
history	array	Preserves prior submissions across a reject → resubmit cycle.

Personal Document Library ("My Documents", from mobile) — reusable across any application, files attach by reference:

`validGovernmentId`, `proofOfAddress`, `barangayClearance`, `businessRegistration`, `taxDocument`, `propertyDocument`, `authorizationLetter`, `supportingDocument`, `other`, `uncategorized` — accepted file types: PDF, JPG, JPEG, PNG.

5.5 Assessment (Order of Payment) & Payment

Field	Type	Notes
Assessment.status	'Draft' 'For Approval' 'Issued' 'Partially Paid' 'Paid' 'Overdue' 'Superseded' 'Voided'	Versioned — a correction after issuance never rewrites a partly-paid record; it supersedes it.
Assessment.lineItems	array	Each line: code, name, family, authority (DPWH/BFP/LGU), amountCentavos, legal basis.
Assessment.opsNumber, totalCentavos, amountPaidCentavos, balanceCentavos		
PaymentTransaction.method	'Bank Transfer' 'Onsite'	No GCash/e-wallet/card exists in either app today — see Section 15.
PaymentTransaction.status	'Pending Verification' 'Verified' 'Rejected' 'Voided'	
PaymentTransaction.agency	'OBO/LGU' 'BFP'	Fees for BFP-routed permits (FSEC/FSIC) are collected/tracked separately from OBO/LGU fees.
orNumber, orDate, orIssuedBy	string	Never client-set — only a cashier/back-office action populates these; until then the receipt reads "Payment Acknowledgment," not "Official Receipt" (see Section 10).

5.6 Generated Permit & Notifications

Entity	Key Fields
GeneratedPermit	applicationId, permitNumber, issuedDate, expiryDate (null when the permit type has no fixed validity, e.g. Certificate of Occupancy), approvingOfficial, approvingOffice.
AppNotification	id, applicationId (nullable), title, message, createdAt, isRead.
NotificationPreferences	applicationUpdates, paymentNotifications, permitStatusUpdates, documentReminders, systemAnnouncements, emailNotifications, smsNotifications, pushNotifications.

Information Architecture & Navigation

Adopted from `docs/08-Reusable-Stitch/03-Application-Map.md`, populated with the concrete modules this system actually needs.

6.1 Public Access

Landing Page → Login / Register / Forgot Password

6.2 Authenticated Sitemap

- **Dashboard** — application summary, active permits, quick actions, recent notifications.
- **My Businesses** — list, register new, business detail (overview / applications / documents / activity tabs).
- **Permit Services**
 - Requirements Checklist (browse all 19 permit types + their document lists before starting)
 - New Application (generic 3-step wizard: Business & Permit Type → Documents → Review)
 - 19 domain-specific wizards (Building Permit is the reference 9-step implementation; all others follow the same shape, scoped to their own fields/documents)
 - Renewal / Amendment entry points
- **My Applications** — list + Application Details (status timeline, documents, payment card, permit-issued state)
- **My Documents** — personal document library, reusable across applications
- **Payments** — assessment view, payment flow, payment/receipt history
- **Notifications** — list, filters, mark read/unread
- **Profile** — view/edit profile, change password, notification preferences, language, legal (Terms, Privacy)
- **Help & Support** — FAQ, contact info

6.3 Navigation Principles

- Every screen has a single clear purpose; users always know their current location (breadcrumb or step indicator).
- Back navigation preserves in-progress wizard state.
- Navigation patterns stay consistent with the mobile app's bottom-nav groupings (Home / Applications / Payments / Profile) reflected as the web's primary nav.

Screen-by-Screen Command List

7.1 Authentication

Screen	Command	Mirrors
Register	3-step wizard: (1) Personal — First/Middle/Last Name, DOB (18+), Sex, Civil Status, Nationality; (2) Contact — Email, Mobile, Address block, Postal Code; (3) Security — Password (min 8, ≥1 letter, ≥1 number), Confirm Password, Terms + Privacy checkboxes.	<code>register_screen.dart</code>
Login	Email/mobile + password; "Forgot Password" link.	<code>login_screen.dart</code>
Forgot Password	Email-based reset flow (build real — mobile's is UI-only mock).	<code>forgot_password_screen.dart</code>
Registration Success	Confirmation screen; route to email/mobile verification if not yet verified.	<code>registration_success_screen.dart</code>

7.2 Dashboard

Application summary cards, active-application cards (status + next step), quick actions ("Apply for Permit," "Register Business"), recent notifications feed. Content differs by role per `02-User-Roles.md` §"Dashboard Stitch" — Business Owner sees application summary / permit status / notifications / quick actions only, never system-wide metrics.

7.3 Business Management

- **My Businesses** (list) — search, filter, each card links to detail.
- **Register Business** — flat form: Business Name*, Category* (Retail/Food Service/Services/Manufacturing/Wholesale/Other), Street*, Barangay*, City*, Province*.
- **Business Details** — overview, applications filed against this business, documents, activity/audit-style history.

7.4 Permit Services

- **Requirements Checklist** (new — not in mobile, recommended for web) — browse the full catalog from Section 8 before starting an application, so applicants can gather documents in advance.
- **New Application wizard** (generic) — Step 1: choose Business + Permit Type + Action (New/Renewal/Amendment); Step 2: upload required documents per the catalog for the chosen type; Step 3: Review & Submit.
- **Building Permit wizard** (reference implementation — richest of the 19, build this one fully first) — 9 steps: Applicant Info → Address/Location → Project Information → Building Details → Professional in Charge → Consent/Authorization → Required Documents → Review & Declaration → Assessment/Payment.

- **Remaining 18 wizards** — same step shape as Building Permit, scoped down to each type's own fields (see the mobile `step*_*.dart` files per permit folder) and its own document checklist (Section 8).

7.5 Document Upload

- Attach sources: Take Photo, Choose from Gallery, Choose from Files, Choose from My Documents (web equivalents: camera capture where supported, file picker, drag-and-drop, library picker).
- Accepted formats: PDF, JPG, JPEG, PNG.
- Per-document status badge + remarks visible to the applicant; resubmission after Rejected/Revision Required preserves prior version in history.

7.6 Payments

- **Payments list** — applications awaiting or having payment, tagged with status badge.
- **Payment Flow** — show total assessment + application number; choose Bank Transfer (display bank details, require Proof of Payment upload) or Onsite (display office payment instructions).
- **Payment / Receipt History** — per-transaction record (amount, method, reference, status); receipt title logic per Section 10.4.

7.7 Application Tracking

Application Details screen: status badge (7-value applicant vocabulary, Section 9), progress indicator, "next step" guidance text, full status timeline with timestamps, attached documents, payment card, permit-issued success state with download action once Ready for Release.

7.8 Notifications

List with search + All/Unread filter, mark-all-as-read; notification types cover application submitted, documents under review, assessment/payment available, payment verified, permit ready for release, generic reminders. Preferences screen toggles per Section 5.6.

7.9 Profile & Account

View/Edit Profile (Name, Mobile, Address block — email read-only), Change Password, Notification Preferences, Language, Terms & Conditions, Privacy Policy.

7.10 Help & Support

Static FAQ (how to apply, processing time, editing after submission, payment methods, data security), office hours, contact channel(s) — build these as real, working contact actions (mobile's are explicitly no-op mocks).

Required Documents Master Checklist

The authoritative per-permit-type document catalog, transcribed in full from the admin portal's `requirements-catalog.ts` — the single source every surface (intake wizard, Documents tab, evaluation view) must read from. **Required** items block submission; **Optional** items are conditional/situational. Where a source citation is **CASTILLA_OFFICIAL_FORM_VERIFIED**, the checklist was transcribed directly from a real, obtained Municipality of Castilla / BFP Castilla form; all other entries carry a **PENDING_CASTILLA_VERIFICATION** flag and must be confirmed with the relevant office before production launch — do not present them to applicants as final without that confirmation.

1. Building Permit – New Construction **OBO** CASTILLA_OFFICIAL_FORM_VERIFIED

Required form: Unified Building Permit Form. Validity: 12 months from issuance.

- **Req** Certified True Copy of OCT/TCT (*or Deed of Sale / Donation / Lease Contract / Assignment of Rights if not the registered owner*)
- **Req** Survey Plan
- **Req** Design Plans, signed and sealed (*Architectural, Civil/Structural, Electrical, Sanitary/Plumbing, Mechanical as applicable*)
- **Req** Unified Building Permit Form
- **Opt** Electrical Permit ancillary application form (*if scope includes electrical work*)
- **Opt** Fencing Permit ancillary application form (*if scope includes fencing*)
- **Opt** Architectural Permit ancillary application form
- **Opt** Sanitary/Plumbing Permit ancillary application form
- **Opt** Mechanical Permit ancillary application form
- **Opt** Civil/Structural Permit ancillary application form
- **Opt** Excavation Permit ancillary application form
- **Opt** Electronics Permit ancillary application form
- **Req** Cost Estimate, signed and sealed
- **Req** Technical Specifications, signed and sealed
- **Req** Structural Design and Analysis
- **Req** Soil Analysis / Plate Load Test / Seismic Analysis
- **Req** Valid PRC Licenses of all involved professionals
- **Req** Valid ID of Applicant and Owner of Lot
- **Req** Zoning / Locational Clearance (*issued by MPDC*)
- **Req** Fire Safety Evaluation Clearance (*issued by BFP*)
- **Req** Approved Construction Safety and Health Program (*DOLE*)
- **Req** Road Clearance (*DPWH/PEO*)

2. Building Permit – Renovation / Alteration

OBO

PENDING_CASTILLA_VERIFICATION

Validity: 12 months.

- **Req** Land Title or Tax Declaration of the property
- **Opt** Owner's Written Consent (*if applicant is not the lot owner*)
- **Req** Barangay Clearance
- **Req** Locational Clearance / Zoning Certification
- **Req** Valid Government-Issued ID of Applicant/Owner
- **Req** Renovation/Alteration Plans, signed and sealed
- **Opt** Copy of Original Building Permit (*if available*)
- **Req** Bill of Materials and Specifications
- **Req** PRC License and PTR of Engineer/Architect of Record

3. Building Permit – Addition / Extension

OBO

PENDING_CASTILLA_VERIFICATION

Validity: 12 months.

- **Req** Land Title or Tax Declaration of the property
- **Opt** Owner's Written Consent
- **Req** Barangay Clearance
- **Req** Locational Clearance / Zoning Certification
- **Req** Valid Government-Issued ID
- **Req** Addition/Extension Plans, signed and sealed
- **Req** Structural Analysis for the added load, signed and sealed
- **Req** Bill of Materials and Specifications
- **Req** PRC License and PTR of Engineer/Architect of Record

4. Demolition Permit

OBO

PENDING_CASTILLA_VERIFICATION

Validity: 6 months.

- **Req** Land Title or Tax Declaration of the property
- **Opt** Owner's Written Consent
- **Req** Barangay Clearance
- **Req** Locational Clearance / Zoning Certification
- **Req** Valid Government-Issued ID
- **Req** Method of Demolition / Work Plan
- **Req** Structural Safety Assessment and Safety Measures Plan
- **Req** PRC License and PTR of Engineer of Record

- **Opt** Utility Disconnection Clearance (*water/power*)

5. Zoning / Locational Clearance

MPDO / Zoning

CASTILLA_OFFICIAL_FORM_VERIFIED — Form FM-MPD-12

Required form: Application for Locational Clearance / Certificate of Zoning Compliance. Validity: 12 months (by standard practice; not printed on the form itself). This clearance is itself a prerequisite document for most other permit types above.

- **Req** Land Title or Tax Declaration of the property
- **Opt** Owner's Written Consent
- **Req** Barangay Clearance
- **Req** Valid Government-Issued ID
- **Req** Notarized Letter Request addressed to the Zoning Administrator
- **Req** Site Development Plan
- **Req** Vicinity Map
- **Req** Sketch Plan of the House
- **Req** Bill of Materials
- **Req** Proof of Ownership
- **Req** Tax Declaration / Certificate of Title (COT) / OCT
- **Req** Land Tax Receipt (Current Year)
- **Req** Barangay Building Clearance
- **Req** Cedula (Photocopy)
- **Opt** DPWH Clearance (*if applicable*)
- **Opt** Environmental Compliance Certificate / ECC (*if applicable*)

6. Architectural Permit

OBO

PENDING_CASTILLA_VERIFICATION

- **Req** Land Title or Tax Declaration · **Opt** Owner's Written Consent · **Req** Barangay Clearance · **Req** Locational Clearance · **Req** Valid Government ID
- **Req** Architectural Plans, signed and sealed
- **Req** PRC License and PTR of Architect of Record

7. Civil / Structural Permit

OBO

PENDING_CASTILLA_VERIFICATION

- Common documents (Land Title, Barangay Clearance, Locational Clearance, Valid ID) — see item 6
- **Req** Structural Plans, signed and sealed
- **Req** Structural Design Analysis
- **Req** PRC License and PTR of Civil Engineer of Record

8. Electrical Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Electrical Plans, signed and sealed
- Req PRC License and PTR of Professional Electrical Engineer of Record

9. Mechanical Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Mechanical Plans, signed and sealed
- Req PRC License and PTR of Professional Mechanical Engineer of Record

10. Sanitary Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Sanitary / Plumbing Plans, signed and sealed
- Req PRC License and PTR of Sanitary Engineer / Master Plumber of Record

11. Plumbing Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Plumbing Layout Plans, signed and sealed
- Req PRC License and PTR of Master Plumber of Record

12. Electronics Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Electronics/Communications Layout Plans, signed and sealed
- Req PRC License and PTR of Professional Electronics Engineer of Record

13. Interior Design Permit OBO PENDING_CASTILLA_VERIFICATION

- Common documents — see item 6
- Req Interior Design Layout Plans, signed and sealed
- Req PRC License and PTR of Interior Designer of Record

14. Fencing Permit OBO PENDING_CASTILLA_VERIFICATION

Validity: 6 months.

- Common documents — see item 6
- **Req** Fence Plan / Site Development Plan

15. Sign Permit **OBO** PENDING_CASTILLA_VERIFICATION

Validity: 12 months, subject to annual renewal.

- Common documents — see item 6
- **Req** Sign Design and Structural Detail (*if elevated or free-standing*)
- **Opt** PRC License and PTR of Engineer of Record (*required only for elevated/structural signs*)

16. Excavation Permit **OBO** PENDING_CASTILLA_VERIFICATION

Validity: 6 months.

- Common documents — see item 6
- **Req** Excavation / Site Development Plan
- **Opt** Geotechnical / Soil Assessment (*if excavation exceeds regulated depth*)
- **Req** PRC License and PTR of Engineer of Record

17. FSEC for Building Permit (BFP) **BFP Castilla Fire Station** CASTILLA_OFFICIAL_FORM_VERIFIED — BFP-QSF-FSED-001

Fire Safety Evaluation Clearance — statutory prerequisite to a Building Permit under RA 9514. No fixed validity printed on the form.

- Common documents — see item 6
- **Req** Three (3) complete sets of proposed plans: Architectural, Civil/Structural, Electrical, Mechanical, Plumbing, Electronics, Sanitary, and Fire Protection documents
- **Opt** Fire Safety Compliance Report (FSCR), one set (*if necessary*)
- **Req** Cost Estimate of the building (incl. labor), signed, sealed, and notarized, one set
- **Opt** Fire Safety Clearance for Welding, Cutting, and other Hot Work Operations (*if required*)

18. Certificate of Occupancy **OBO / BFP** PENDING_CASTILLA_VERIFICATION

Validity: for the life of the structure unless use/occupancy/ownership changes.

- Common documents — see item 6
- **Req** As-Built Plans
- **Req** Certificate of Completion
- **Req** Fire Safety Inspection Certificate (final)

- **Req** Certificate of Final Electrical Inspection

19. FSIC for Occupancy Permit (BFP)

BFP Castilla Fire Station

CASTILLA_OFFICIAL_FORM_VERIFIED — BFP-

QSF-FSED-002

Final Fire Safety Inspection Certificate — statutory prerequisite to a Certificate of Occupancy under RA 9514 §5(g)/7(a).

- Common documents — see item 6
- **Opt** As-Built Plan (*if necessary*)
- **Req** Endorsement from the Office of the Building Official (OBO)
- **Req** Certificate of Completion
- **Req** Certified True Copy of the Assessment Fee for securing the Certificate of Occupancy from OBO
- **Opt** Fire Safety Compliance and Commissioning Report (FSCCR), one set (*if necessary*)

"Common documents" reference (item 6 onward): Land Title or Tax Declaration of the property

Req ; Owner's Written Consent, if applicant is not the lot owner **Opt** ; Barangay Clearance **Req** ; Locational Clearance / Zoning Certification **Req** ; Valid Government-Issued ID of Applicant/Owner **Req** .

Generic New Business Permit wizard's document set (distinct, simpler list) — used only by the non-domain-specific "New Application" flow (Section 7.4): Valid Government ID, Barangay Clearance, Proof of Business Address — all three required. Keep this list intact for that flow; do not merge it into the 19-type catalog above.

Application Lifecycle & Status Parity

The admin portal's 19-state internal lifecycle and mobile's 7-state applicant-facing vocabulary describe **the same underlying record at two levels of detail** — not two disconnected systems. The User Portal must display the 7-value column below (applicant-facing), while the underlying record may carry any of the 19 internal states.

Internal Lifecycle Status (admin, 19 values)	Applicant-Facing Status (User Portal must show)
Draft	Draft
Submitted	Submitted
Received	Submitted
Document Verification	Under Review
Under Evaluation	
Revision Required	
Assessed	
Payment Submitted	Payment Verification
Payment Under Verification	
Payment Verified	
For Approval	
Approved	
Permit Generated	Approved
Ready for Release	Ready for Release
Released	
Completed	
Rejected	Rejected
Cancelled	
Expired	

Happy path: Draft → Submitted → Received → Document Verification → Under Evaluation → Assessed → Payment Submitted → Payment Under Verification → Payment Verified → For Approval → Approved → Permit Generated → Ready for Release → Released → Completed. Terminal exits: Rejected, Cancelled, Expired, Completed — reachable from most non-terminal states via the same transition rules the admin enforces (`VALID_TRANSITIONS`). The User Portal never needs to enforce these transitions itself (that's an admin/backend responsibility) but must render the timeline consistently with them.

The Application Details screen should show, per Section 7.7: current status badge, progress indicator, a plain-language "what happens next" line, and a full timestamped timeline.

Payment & Assessment Model

10.1 Flow

Under Evaluation → an Assessment (Order of Payment) is issued, listing fee line-items by family (Filing/Processing, Building Permit Fee, Electrical/Mechanical/Plumbing/Sanitary/Electronics Permit Fee, DPWH Accessory/Ancillary Structure Fee, Occupancy Assessment, Fire Code Assessment, Architectural/Civil-Structural/Interior Fee, Line and Grade Fee, Hotworks Fee, Locational/Zoning Fee, Surcharges & Penalties) → applicant pays → payment verified → application proceeds to approval.

10.2 Payment Methods

Method	Status	Behavior
Bank Transfer	Live in both apps	Show bank name, account name/number, branch; require Proof of Payment upload.
Onsite	Live in both apps	Show office payment instructions; staff marks as paid after in-person collection.
Online Payment / Government Payment Gateway (GCash / PayMongo via eGov PH)	Configured but inactive in admin; absent entirely from mobile	Do not build against this until a real gateway integration is commissioned — see Section 15.

10.3 Transaction & Adjustment Lifecycle

Transaction: Pending Verification → Verified | Rejected, plus Voided. Adjustments against a Verified transaction (Void / Reversal / Refund / Correction) are permanent, append-only records — never edit a verified transaction in place.

10.4 Receipt Display Rule

A generated receipt reads **"Official Receipt"** only once a real cashier-entered OR number exists on the record. Until then, it must read **"Payment Acknowledgment."** Carry this rule into the User Portal exactly as implemented in the admin's document-preview logic — do not let the client fabricate an OR number.

10.5 Indicative Flat Fees (generic New Application flow only)

Application Action	Amount
New Permit	₱5,250.00
Renewal	₱3,200.00
Amendment	₱1,500.00

These flat amounts are mobile-app placeholders for the generic wizard only. The 19 domain-specific permit types use the admin's line-item fee-rule engine instead, and almost every one of those rules is marked `PENDING_LGU_VALIDATION` — no real peso amount is confirmed anywhere in the existing system. Do not present computed fees to applicants as final until Castilla's actual fee schedule is obtained (Section 15).

Mobile → Web Feature Parity Matrix

Mobile Capability	Required Web Equivalent
Onboarding carousel	Marketing/landing page covering the same value props ("apply from anywhere," "submit and manage requirements," "track your application")
3-step Register / Login / Forgot Password	Same fields, same validation rules (Section 7.1)
Bottom-nav shell (Home / Applications / Payments / Profile)	Persistent top or side navigation with the same four anchors, plus Businesses and Documents surfaced directly (web has more room than mobile's 4-tab limit)
Dashboard stat/quick-action cards	Same cards, responsive grid layout
My Businesses / Register Business / Business Details	Same three screens and fields (Section 7.3)
Applications catalog (Building/Ancillary/Other/Certificates grouping)	Same grouping and 19 entry points (Section 7.4)
Generic New Business Permit 3-step wizard	Same 3 steps and document list (Section 8, generic callout)
Building Permit 9-step wizard (richest flow)	Same 9 steps, same field set, build first as the reference pattern for the other 18
Attach-document bottom sheet (camera/gallery/files/My Documents)	File picker + drag-and-drop + "choose from My Documents" library picker
My Documents personal library (9 categories)	Same 9 categories, same reuse-across-applications behavior (Section 5.4)
Payments list + Payment Flow (Bank Transfer / Onsite)	Same two methods, same proof-of-payment / mark-as-paid pattern
Application Details (status, timeline, next-step text, permit-issued alert)	Same, plus a permit/certificate download action once released — mobile does not implement this yet; web should, since staying at parity with mobile's gap is not useful to the user
Notifications list + preferences	Same list/filter/preferences behavior (Section 7.8)
Profile / Edit Profile / Change Password / Language / Legal	Same screens and fields (Section 7.9)
Help & Support FAQ + contact (mock/no-op in mobile)	Same FAQ content, but wire "Contact Support" and "Send Feedback" to a real channel — do not carry the mock no-op forward
Multiple businesses per account	Preserve exactly — a single login manages every business the owner registers

Design System & Branding Directives

12.1 Typography

Type scale from `docs/01-Brand-Guidelines/04-Typography.md` : Display 48/42/36px (desktop/tablet/mobile, weight 700); H1 32/30/28 (700); H2 28/26/24 (600); H3 24/22/20 (600); H4 20/20/18 (600); Body Large 16 (400); Body 14 (400, minimum for reading content); Small 12; Caption 11. Buttons: 14px/600, sentence case ("Submit Application," never all-caps). Minimum contrast: WCAG AA.

12.2 Color Tokens

Token	Hex	Usage
Primary 500	#2563EB	Primary buttons, links, active nav
Success 500 / Text	#16A34A / #166534	Approved states
Warning 500 / Text	#F59E0B / #92400E	Pending states
Danger 500 / Text	#DC2626 / #991B1B	Errors, rejected states
Info 500 / Text	#0EA5E9 / #0369A1	Notifications
Background / Surface	#F8FAFC / #FFFFFF	App background / cards

Unresolved brand conflict — flag before build. This is the palette documented as "Approved" in `docs/01-Brand-Guidelines/03-Color-Palette.md` (blue primary). The *actual, implemented* Admin Web Portal instead uses a brand-red primary (`#c81e2c` / `#a5182a`), per its own `_tokens.scss` ("Esperanza / E-BPCO design tokens") and confirmed by the sibling `castilla-lgu-portal` 's README, which explicitly aligns to that red. The two are not reconciled anywhere in the repository. Do not silently pick one for the User Portal — see Section 15, Open Decision #2.

12.3 Components & Layout

Reuse the shared component vocabulary already named in `docs/03-Component-Library` and the admin's own `shared/` folder: KPI/stat cards, data tables with pagination, filter panels, toast notifications, confirmation/success/error dialogs, step indicators, file uploaders, document-preview panels. Apply `docs/06-Web-Guidelines` for grid, responsive breakpoints, data-table, and dashboard conventions; apply `docs/04-UX-Standards` for form experience, error handling, and accessibility.

Non-Functional, Security & Compliance Requirements

- **RBAC enforcement on both client and server.** The Business Owner role must never see or reach internal admin actions; this must be enforced server-side, not merely hidden in the UI (per `02-User-Roles.md` §Permission Principles).
- **Real authentication.** Both existing apps mock login (admin: every login becomes "Super Admin" regardless of credentials; mobile: local mock account only). The User Portal requires a genuine authentication and session system from day one — it is public-facing.
- **Real contact verification.** Email/mobile verification must be functional (OTP or verification link), not the manual/admin-only mock the admin portal currently has.
- **Audit trail.** Mirror the admin's append-only `AuditEvent` pattern for anything the applicant does that changes state (submission, resubmission, payment, cancellation), surfaced to the applicant as a simplified "Application History" view.
- **Accessibility.** WCAG AA minimum contrast; never use color as the sole status indicator — always pair with icon/label/badge (per `03-Color-Palette.md` §Accessibility).
- **Data privacy.** Business owner personal data (ID numbers, addresses, financial/payment proof documents) falls under the Philippine Data Privacy Act (RA 10173) — apply access controls and encryption-at-rest consistent with that obligation; do not expose applicant PII to another applicant's session under any condition.
- **File upload validation.** Enforce accepted types (PDF/JPG/JPEG/PNG) and a sane size limit server-side, not just in the client picker.

Recommended Build Phases

Phase	Scope
1 — Foundation	Auth (real), Profile, My Businesses, Dashboard shell, design tokens reconciled (Section 12.2 decision resolved first)
2 — Core Permit Application	Requirements Checklist browser, generic New Application wizard, Building Permit 9-step wizard as the reference pattern, Document Upload + My Documents library
3 — Remaining Permit Types	Roll out the remaining 18 domain wizards from the Building Permit pattern, each scoped to its own fields/documents (Section 8)
4 — Payments	Assessment/Order-of-Payment view, Bank Transfer + Onsite payment flow, receipt/history, "Payment Acknowledgment" vs "Official Receipt" rule (Section 10.4)
5 — Tracking & Notifications	Application Details timeline, status parity mapping (Section 9), Notification Center + preferences, permit/certificate download on release
6 — Polish, Accessibility, QA	WCAG AA audit, responsive QA (per <code>06-Web-Guidelines/07-Responsive-Web.md</code>), full parity walkthrough against Section 11's matrix

Open Decisions Requiring Stakeholder Input

1. **Tech stack confirmation.** Angular 22 is recommended (Section 4) for parity with the admin portal's domain models and tokens; confirm before build start.
2. **Brand palette reconciliation.** Blue (documented "Approved" palette) vs. red (actually implemented in admin) — pick one and update whichever source is wrong, per Section 12.2. Building the User Portal against either without resolving this guarantees a visual mismatch with one of the two existing surfaces.
3. **Backend / API design.** Neither existing system has a real backend. A shared API serving the Admin Portal, the Mobile App, and this new User Portal needs to be designed against the reconciled data model in Section 5 before any of these three surfaces can move off mock data.
4. **Payment gateway integration.** Online Payment / GCash / PayMongo via eGov PH is configured-but-inactive in admin and entirely absent from mobile. Commission this as its own integration project before exposing it to applicants.
5. **LGU fee-schedule validation.** Nearly every fee-calculation rule in the admin's fee-rule engine is marked pending LGU validation — obtain Castilla's actual, confirmed fee schedule before computed assessments are shown to applicants as final.
6. **Document-checklist verification.** Most of the 19 permit types' checklists in Section 8 are marked `PENDING_CASTILLA_VERIFICATION` (only Building Permit – New Construction, Zoning/Locational Clearance, FSEC, and FSIC are verified against real obtained Castilla/BFP forms). Confirm the remaining 15 with the Municipality of Castilla OBO before production launch.
7. **DTI/SEC business-registration module.** Explicitly out of scope for this command (Section 2). Revisit only as a deliberate, separately-scoped decision.

Appendix — Reference Enumerations & Source Files

16.1 Full Permit Type List (exact order and wording — do not alias or reorder)

1. Building Permit – New Construction
2. Building Permit – Renovation / Alteration
3. Building Permit – Addition / Extension
4. Demolition Permit
5. Zoning / Locational Clearance
6. Architectural Permit
7. Civil / Structural Permit
8. Electrical Permit
9. Mechanical Permit
10. Sanitary Permit
11. Plumbing Permit
12. Electronics Permit
13. Interior Design Permit
14. Fencing Permit
15. Sign Permit
16. Excavation Permit
17. FSEC for Building Permit (BFP)
18. Certificate of Occupancy
19. FSIC for Occupancy Permit (BFP)

16.2 Document Status Enum

Missing · Uploaded · Submitted · Under Review · Accepted · Rejected · Revision Required · Expired

16.3 My Documents Library Categories

Valid Government ID · Proof of Address · Barangay Clearance · Business Registration · Tax Document · Property Document · Authorization Letter · Supporting Document · Other · Uncategorized

16.4 Notification Preference Fields

applicationUpdates · paymentNotifications · permitStatusUpdates · documentReminders · systemAnnouncements · emailNotifications · smsNotifications · pushNotifications

16.5 Six Seeded Reviewing Offices (from admin's Department model)

Office	Short Name
--------	------------

Office of the Building Official	OBO
Municipal Planning and Development Office	Zoning / MPDO
BFP Castilla Fire Station	BFP
Municipal Health Office	Health
Municipal Treasurer's Office	Treasury
Office of the Mayor	Mayor

16.6 Primary Source Files Consulted

- `EBPCO WEB ADMIN/E-BPCO-Software-main/src/app/core/domain/*.model.ts` — all data models
- `.../core/domain/requirements-catalog.ts` — the 19-type document catalog (Section 8)
- `.../core/domain/status.model.ts` — lifecycle states and mobile-label mapping (Section 9)
- `.../core/domain/permit.model.ts`, `assessment.model.ts`, `payment.model.ts`, `fee-rule.model.ts`
- `ebpc-mobile/lib/core/models/*.dart` — user, business, application, payment/assessment, notification, saved-document models
- `ebpc-mobile/lib/features/**/presentation/*.dart` — full screen inventory (Section 7)
- `docs/08-Reusable-Stitch/02-User-Roles.md`, `03-Application-Map.md` — role and IA framework (Sections 3, 6)
- `docs/01-Brand-Guidelines/03-Color-Palette.md`, `04-Typography.md` — design tokens (Section 12)
- `assets/Permits/*.pdf`, `public/assets/permits/*.pdf` — real OBO/BFP/MPDO reference forms underlying Section 8
